3×5 Reference Card #2

loop forms

```
for (init, test, iter) { body }  // good if #times known
while (condition) { body }  // good if #times unknown
do { body } while(condition);  // runs @ least once
```

arrays

arrays have types
array access is that type
int foo [] → foo[] is an int!

Input Validation

```
while (fail conditions) {
    Prompt
    clear()
    ignore (int, '\n')
    Cin
} // clear and ignore cin funcs
```
